

Organic Aloe Vera Juice - Pukka

Our Aloe Vera juice is made from 100% organic Aloe Vera Barbadensis (Miller) and certified by the Soil Association with the least amount of processing possible.

We use only the inner leaf gel, not the outer rind, as this is the active component. We do not use whole leaf as the outer rind contains harsh laxatives that need to go through a number of filtration processes to remove it (along with other essential nutrients). Using the inner gel means all of the beneficial fibre is retained with no bitterness in the final juice, and no Aloin content.

Our Aloe Vera juice contains 1030mg/litre of mucopolysaccharides; these are one of the primary 200 healing components of Aloe Vera and are considered to be one of the main healing active ingredients.

Our Aloe Vera has a total of over 5000mg/litre of Aloe Vera solids. Aloe Vera solids are the total active compounds in the inner gel.

We have a strict process of hand selecting only mature and fresh Aloe Vera leaves for optimum potency and quality.

Our juice is cold processed to maximise potency and is unfiltered to produce an organic, pure and cloudy drink.

We do not use synthetic preservatives such as allergenic potassium sorbate, sodium benzoate or ascorbic acid as many other Aloe Vera juices may do. Our pure juice is preserved in just 0.1% of citric acid made from tapioca.

No concentrates, No added water or flavours, No sweeteners or thickeners.

Not recommended for use in pregnancy

Shelf life: Our Aloe Vera juice will keep for 2 years unopened in a cool dark place. Once opened, use within 3 weeks and keep refrigerated.
